Abstract of JP7014369

PURPOSE: To record a series of program at the prescribed position in order of recording and to reproduce it automatically and continuously in order of recording by detecting a program recorded after a reproduced program, reading out a start position of a tape and performing program searching.

CONSTITUTION: When a cassette 1 is inserted into a VTR set 14, a microcomputer 5 recognizes that which cassette is inserted by reading a bar code 2 stuck on the cassette 1 with a bar code reader 3. And when a prescribed reserved program is recorded in a static type RAM, that is, SRAM 4, a cassette number, recording date, recording start time, recording finish time, a recording channel, and a program number are stored. Then, the SRAM 4 detects a cassette number, a program recorded after a reproduced program is detected, and program searching of the program is performed by reading a start position. Thereby, a series of program can be reproduced automatically and continuously in order of recording.
